How to install daHornet bis?

- 1) You can install "daHornet bis" only in x64 Windows OS.
- 2) Run the vcredist_x64.exe from the downloaded archive.
- 3) Copy the NUsofting_daHornet_bis.dll file into your "Vstplugins" folder for the VSTi 2.4 x64 plug-ins.
- 4) Keep the extra presets bank files wherever you like, you can load only one daHornet bank at time (128 presets) using the DAW/Host functions.

With a Right Click on the logo you can call the Options Menu:

- **Save Default Bank**
Save the current bank of presets as UserPresets, and loads up when you insert a new instance of the synth.
- **Load Factory Factory**
Restore internal Factory or User Presets. (it asks for which)
- **About**
Shows information about the synth authors and version number.
- **Keyboard**
Show/Hide the virtual keyboard.
- **Random**
Generate Random Patches by Type: Bass, Pad, Lead, FX.
- **AutoGlide**
When ON, Glide only happens when you hold a note and play others.
- **Presets**
List of internal presets on wide menu.

The LFO (CONTROL OSC.) can be synced to the song tempo :BPM, for groovy filter effects:

click on the "MIDI" button and the FREQ. knob will now select a musical rhythmic division as rate of the LFO
